Student Outcomes and Performance Indicators

A performance indicator identifies the performances that the faculty will look for in order to determine whether or not a student outcome is met. Indicators facilitate the development of the curriculum and also focus the data collection process. In addition to the outcomes, the performance indicators should be communicated to students in the program description and stated in terms that inform the students about the general purpose of the program and expectations of the faculty. The primary difference between student outcomes and performance indicators is that student outcomes are intended to provide general information about the focus of student learning and are broad statements of the expected learning, while performance indicators are concrete measurable performances students must meet as indicators of achievement of the outcome. For example, student outcomes can be stated as follows:

- Students will work effectively as a member of a team.
- Students can apply the principles of math and science to a technical problem.
- Students will have the ability to engage in lifelong learning.
- Students will have effective communication skills.

Faculty can usually agree on the general outcomes that students should demonstrate by the end of the academic program. However, without a common agreement as to what specific performances should be expected from students around each of the outcomes there is no way to have a systematic, efficient nor meaningful process of data collection to determine if the outcomes have been met. The development of performance indicators is unquestionably the most critical part of developing a systematic and meaningful data collection process around program assessment and improvement.

Performance indicators identify what concrete actions the student should be able to perform as a result of participation in the program. Once program outcomes have been identified, the knowledge and skills necessary for the mastery of these outcomes should be listed. This will allow the desired behavior of the students to be described, and will eliminate ambiguity concerning demonstration of expected competencies. Performance indicators are made up of at least two main elements; an action verb, which identifies the depth to which students should demonstrate the performance, and the content referent, which is the focus of the instruction. The expected behavior must be specific, using an observable action verb such as demonstrate, interpret, discriminate, or define. The following is an example of an outcome with its performance indicators:
Outcome: Students should be able to conduct an experiment and interpret data

Performance indicators:
Students will be able to demonstrate the ability to:
- Follow the design of an experiment plan (knowledge)
- Acquire data on appropriate variables (application)
- Compare experimental results to appropriate theoretical models (analysis)
- Offer explanation of observed differences between model and experiment (evaluation)

Further Reading:
**Cognitive** learning is demonstrated by knowledge recall and the intellectual skills: comprehending information, organizing ideas, analyzing and synthesizing data, applying knowledge, choosing among alternatives in problem-solving, and evaluating ideas or actions.

AFFECTIVE learning is demonstrated by behaviors indicating attitudes of awareness, interest, attention, concern, and responsibility, ability to listen and respond in interactions with others, and ability to demonstrate those attitudinal characteristics or values which are appropriate to the test situation and the field of study.

**PSYCHOMOTOR** learning is demonstrated by physical skills: coordination, dexterity, manipulation, grace, strength, speed; actions which demonstrate the fine motor skills such as use of precision instruments or tools, or actions which evidence gross motor skills such as the use of the body in dance or athletic performance.

<tr>
<th>Learning levels</th>
<th>Level Indicators</th>
<th>Assessment Task</th>
</tr>
</thead>
</table>
| **Knowledge**   | Define, Describe, Label, Recite, Select, State, Write, Identify | **Remembering previous learned information:**  
- Complete multiple choice  
- Fill in the blank  
- Provide oral response  
- Complete true/false  
- Develop a list  
- Choose among alternatives (could be a list) |
| **Comprehension** | Match, Paraphrase, Restate, Illustrate, Compare, Predict, Defend, Explain | **Grasping the meaning of Information previously presented:**  
- Give an analogy  
- Create an outline  
- Summarize in own words  
- Create a concept map  
- Draw a diagram  
- Graph the answer  
- Match term with a definition |
| **Application**  | Apply, Change, Make, Model, Show, Calculate, Examine, Solve, Use | **Using principle/formula/processes previously learned:**  
- Compute an answer  
- Solve a problem similar to previous problems  
- Solve a problem in a new setting  
- Create a model  
- Write an essay that requires the use of the concepts/processes learned  
- Use theory or principle to explain an event or phenomena |
| **Analysis**     | Analyze, Compare/contrast, Differentiate, Categorize, Distinguish, Relate | **Breaking down objects or ideas into simpler parts and seeing how the parts relate and are organized:**  
- Deconstruct a model  
- Identify differences  
- Group like items together  
- Identify what is missing  
- Identify cause and effect  
- Perform a SWOT analysis  
- Discuss an event/perspective from multiple perspectives  
- Present the potential impact resulting from a decision or choice |
| **Evaluation**   | Evaluate, Select, Recommend, Rank, Critique, Judge, Assess | **Making judgments based on internal evidence or external criteria:**  
- Choose best among options and defend your choice  
- Rank from best to worse using establish criteria  
- Develop criteria for judgment and apply to a solution  
- Recommend and defend choice for action  
- Present the pros and cons of an approach  
- Determine the degree of success or failure of an action or event |
| **Create**       | Make, Generate, Build, Form, Construct, Design, Fashion, Produce | **Making or producing something based on previously learned information and processes:**  
- Create an end-of program capstone project  
- Complete a summative class project  
- Write a summative paper in a course  
- Write an end-of program thesis  
- Write an end-of program dissertation  
- Design an original approach to a situation or problem  
- Conduct independent research |
